

**An innovation in the world of tennis: the Tri-tennis®! This new product makes playing tennis and similar sports possible everywhere, and for amateurs and professionals!**

The Tri-tennis® is a playing pitch made of weatherproof sailcloth that is attached by springs to a galvanized-steel frame. When you hit a ball against the canvas it always returns with the **same speed**, irrespective of the speed of the serve, and at just the right distance for your next volley. Upon hitting the ball, Tri-tennis® gives you sufficient time to prepare for the next stroke.

In contrast, when a ball is hit against a practice wall (of stone, for example), how it returns depends on the point of contact and the speed of serve.

The Tri-tennis® is suitable for various playing styles and even for a variety of sports. It can be set up on every kind of surface and in all weathers. It is also ideal for all ages and abilities, making it a really handy device for tennis trainers. In addition, the Tri-tennis® is suitable for children just beginning with tennis because it is possible for several children to play at the same time.

In addition to offering more playing satisfaction and further improvement in technique compared to a standard backboard or practice wall, the Tri-tennis® is compact and can be easily set up in a whole host of locations (consider, for instance, sports centres, sports shops and tennis clubs, but also campsites, recreation grounds, community halls, or even your own home, in the garden or carport).

There are two versions of the Tri-tennis® available right now: the Tri-tennis® PRO and the Tri-tennis® XL. The Tri-tennis® PRO comes with a green tennis canvas as standard and optionally with an extra canvas. There is, for example, a sheet with numbered holes of various sizes that you can mount at the rear of the frame for ball practice. The Tri-tennis® PRO can also be turned around to serve as a hockey or football goal.

The Tri-tennis® XL is an extended version of the Tri-tennis® PRO. This version is ideal for tennis schools and clubs due to the greater bounce height and the lower noise level as compared to the Tri-tennis® PRO.

You can find more information about the Tri-tennis® PRO and Tri-tennis® XL on our site [www.Tri-tennis.com](http://www.Tri-tennis.com). There, too, you can watch a demonstration film. You can phone us on +31 6 47 29 78 78.

For tennis clubs, sports centres and similar facilities we offer attractive opportunities for giving the Tri-tennis® a trial run: for example during an event or tournament week.

It is possible to print on the tennis canvas, opening up great possibilities for new or existing sponsors. You are invited to contact us for more information!
